Dicretization of Partial Differential Equations (CLW: 7.2, 7.3)

We will follow a procedure similar to the one used in the previous class

We consider the unsteady vorticity transport equation, noting that the equation is non-linear.

8/31/2004

Topic 3 Discretization of PDE

K. M. Isaac MAEEM Dept., UMR

Vorticity vector:
$$\overline{\xi} = curl \, \bar{v} = \bar{\nabla} \times \bar{v}$$

$$= \begin{bmatrix} \bigwedge_{i} & \bigwedge_{j} & \bigwedge_{k} \\ \frac{\partial}{\partial x} & \frac{\partial}{\partial y} & \frac{\partial}{\partial z} \\ u & v & w \end{bmatrix}$$

Is a measure of rotational effects.

 $\overline{\xi}=2\overline{\varpi}$ where $\overline{\varpi}$ is the local angular velocity of a fluid element.

8/31/2004

3

Computational Fluid Dynamics (AE/ME 339)

K. M. Isaac MAEEM Dept., UMR

For 2-D incompressible flow, the vorticity transport equation is given by

$$\frac{\partial \overline{\xi}}{\partial t} + u \frac{\partial \overline{\xi}}{\partial x} + v \frac{\partial \overline{\xi}}{\partial y} = v \nabla^2 \overline{\xi}$$
 (1)

$$\nabla^2 \overline{\xi} \equiv \frac{\partial^2 \overline{\xi}}{\partial x^2} + \frac{\partial^2 \overline{\xi}}{\partial y^2}$$

v - kinematic viscosity $\left(\equiv \frac{\mu}{\rho}\right)^{\frac{m^2}{s}}$

8/31/2004

Topic 3 Discretization of PDE

K. M. Isaac MAEEM Dept., UMR

As in the case of ODE ,the partial derivatives can be discretized Using Taylor series

$$u(x+h,y+k) = u(x,y) + \left(h\frac{\partial}{\partial x} + k\frac{\partial}{\partial y}\right)u(x,y) + \frac{1}{2!}\left(h\frac{\partial}{\partial x} + k\frac{\partial}{\partial y}\right)^{2}u(x,y) + \dots$$

$$\frac{1}{(n-1)!}\left(h\frac{\partial}{\partial x} + k\frac{\partial}{\partial y}\right)^{n-1}u(x,y) + R_{n}$$
(2)

8/31/2004

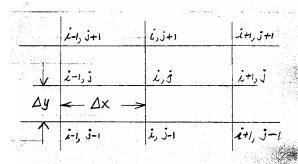

Topic 3 Discretization of PDE

5

Computational Fluid Dynamics (AE/ME 339)

K. M. Isaac MAEEM Dept., UMR

$$R_{n} = O\left[\left(\left|h\right| + \left|k\right|\right)^{n}\right] \tag{3}$$

We can expand in Taylor series for the 8 neighboring points of (i,j) using (i,j) as the central point.

8/31/2004

Topic 3 Discretization of PDE

K. M. Isaac MAEEM Dept., UMR

$$u_{i-1,j} = u_{i,j} - \Delta x u_x + \frac{(\Delta x)^2}{2!} u_{xx} - \frac{(\Delta x)^3}{3!} u_{xxx}$$
 (4)

$$u_{i+1,j} = u_{i,j} + \Delta x u_x + \frac{\left(\Delta x\right)^2}{2!} u_{xx} + \frac{\left(\Delta x\right)^3}{3!} u_{xxx}$$
 (5)

8/31/2004

Topic 3 Discretization of PDE

7

Computational Fluid Dynamics (AE/ME 339)

K. M. Isaac MAEEM Dept., UMR

Here
$$u_x = \frac{\partial u}{\partial x}, u_{xx} = \frac{\partial^2 u}{\partial x^2}$$
 etc.

Note: all derivatives are evaluated at (i,j)

Rearranging the equations yield the following finite difference formulas for the derivatives at (i,j).

$$\frac{\partial u}{\partial x} = \frac{u_{i+1,j} - u_{i,j}}{\Delta x} + O\left(\Delta x\right) \tag{6}$$

8/31/2004

Topic 3 Discretization of PDE

K. M. Isaac MAEEM Dept., UMR

$$\frac{\partial u}{\partial x} = \frac{u_{i,j} - u_{i-1,j}}{\Delta x} + O\left(\Delta x\right) \tag{7}$$

$$\frac{\partial u}{\partial x} = \frac{u_{i+1,j} - u_{i-1,j}}{2\Delta x} + O\left[\left(\Delta x\right)^2\right] \tag{8}$$

$$\frac{\partial^2 u}{\partial x^2} = \frac{u_{i-1,j} - 2u_{i,j} + u_{i+1,j}}{\left(\Delta x\right)^2} + O\left[\left(\Delta x\right)^2\right] \tag{9}$$

8/31/2004

Topic 3 Discretization of PDE

Q

Computational Fluid Dynamics (AE/ME 339)

K. M. Isaac MAEEM Dept., UMR

Eq.(6) is known as the forward difference formula.

Eq.(7) is known as the backward difference formula.

Eq.(8) and (9) are known as central difference formulas.

Compact notation:

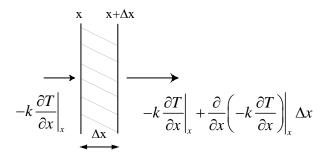

$$\delta_{x} u_{i,j} = \frac{u_{i+\frac{1}{2},j} - u_{i-\frac{1}{2},j}}{\Delta x}$$
 (10)

8/31/2004

The Heat conduction problem (ID)

Consider unit area in the direction normal to x. Energy balance for a CV of cross section of area 1 and length Δx :

Volume of CV, $dV = 1 \Delta x$

8/31/2004

Topic 3 Discretization of PDE

11

Computational Fluid Dynamics (AE/ME 339)

K. M. Isaac MAEEM Dept., UMR

Change in temperature during time interval Δt , = ΔT

Increase in energy of CV:

$$\rho \Delta x \, 1 \, c_p \frac{\partial T}{\partial t} \Delta t + HOT$$

This should be equal to the net heat transfer across the two faces

$$-k\frac{\partial T}{\partial x}\bigg|_{x}\Delta t - \left[-k\frac{\partial T}{\partial x}\bigg|_{x} + \frac{\partial}{\partial x}\left(-k\frac{\partial T}{\partial x}\right)\bigg|_{x}\Delta x\right]\Delta t + HOT$$

8/31/2004

Topic 3 Discretization of PDE

K. M. Isaac MAEEM Dept., UMR

Equating the two and canceling $\Delta t \Delta x$ gives

$$\rho c_p \frac{\partial T}{\partial t} = -\frac{\partial}{\partial x} \left(-k \frac{\partial T}{\partial x} \right)$$

Note: higher order tems (HOT) have been dropped. If we assume k=constant, we get

$$\rho c_p \frac{\partial T}{\partial t} = k \frac{\partial^2 T}{\partial x^2}$$

8/31/2004

Topic 3 Discretization of PDE

13

Computational Fluid Dynamics (AE/ME 339)

K. M. Isaac MAEEM Dept., UMR

Or
$$\frac{\partial T}{\partial t} = \frac{k}{\rho c_p} \frac{\partial^2 T}{\partial x^2} = \alpha \frac{\partial^2 T}{\partial x^2}$$

Where $\alpha \equiv \frac{k}{\rho c_p}$ is the thermal diffusivity.

Letting $\xi = x/L$, and $\tau = \alpha t/L2$, the above equation becomes

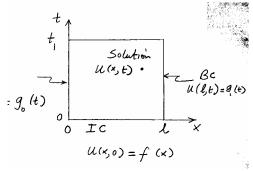

$$\frac{\partial T}{\partial \tau} = \frac{\partial^2 T}{\partial \xi^2}$$

8/31/2004

Topic 3 Discretization of PDE

K. M. Isaac MAEEM Dept., UMR

The above is a Parabolic Partial Differential Equation.

$$\frac{\partial u}{\partial t} = \frac{\partial^2 u}{\partial x^2} \tag{11}$$

Difference Equation

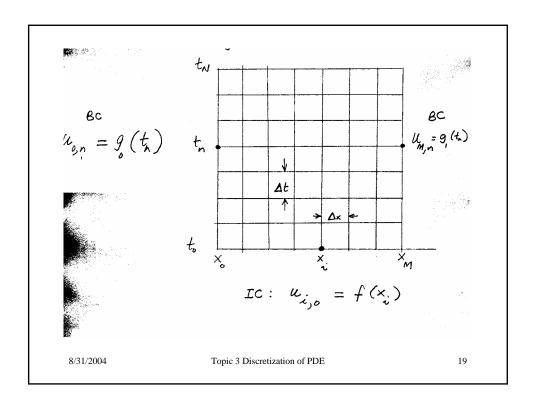

Solution involves establishing a network of Grid points as shown in the figure in the next slide.

Grid spacing:
$$\Delta x = \frac{l}{M}$$
, $\Delta t = \frac{t_1}{N}$

$$\Delta t = \frac{t_1}{\Delta t}$$

8/31/2004

Topic 3 Discretization of PDE

Computational Fluid Dynamics (AE/ME 339)

K. M. Isaac

MAEEM Dept., UMR

M,N are integer values chosen based on required accuracy and available computational resources.

Explicit form of the difference equation

$$\frac{u_{i,n+1} - u_{i,n}}{\Delta t} = \frac{u_{i-1,n} - 2u_{i,n} + u_{i+1,n}}{\left(\Delta x\right)^2}$$
(14)

Define $\lambda = \frac{\Delta t}{(\Delta x)^2}$

8/31/2004 Topic 3 Discretization of PDE

K. M. Isaac MAEEM Dept., UMR

Then

$$u_{i,n+1} = \lambda u_{i-1,n} + (1 - 2\lambda) u_{i,n} + \lambda u_{i+1,n}$$

$$t_{n+1} = \lambda u_{i-1,n} + (1 - 2\lambda) u_{i,n} + \lambda u_{i+1,n}$$

$$t_{n+1} = \lambda u_{i-1,n} + (1 - 2\lambda) u_{i,n} + \lambda u_{i+1,n}$$

$$t_{n+1} = \lambda u_{i-1,n} + (1 - 2\lambda) u_{i,n} + \lambda u_{i+1,n}$$

$$t_{n+1} = \lambda u_{i-1,n} + (1 - 2\lambda) u_{i,n} + \lambda u_{i+1,n}$$

$$t_{n+1} = \lambda u_{i-1,n} + (1 - 2\lambda) u_{i,n} + \lambda u_{i+1,n}$$

$$t_{n+1} = \lambda u_{i-1,n} + (1 - 2\lambda) u_{i,n} + \lambda u_{i+1,n}$$

$$t_{n+1} = \lambda u_{i-1,n} + (1 - 2\lambda) u_{i,n} + \lambda u_{i+1,n}$$

$$t_{n+1} = \lambda u_{i-1,n} + (1 - 2\lambda) u_{i,n} + \lambda u_{i+1,n}$$

$$t_{n+1} = \lambda u_{i+1,n} + (1 - 2\lambda) u_{i,n} + \lambda u_{i+1,n}$$

$$t_{n+1} = \lambda u_{i+1,n} + (1 - 2\lambda) u_{i,n} + \lambda u_{i+1,n}$$

$$t_{n+1} = \lambda u_{i+1,n} + (1 - 2\lambda) u_{i,n} + \lambda u_{i+1,n} + \lambda u$$

Circles indicate grid points involved in space difference Crosses indicate grid points involved in time difference.

Topic 3 Discretization of PDE

21

Computational Fluid Dynamics (AE/ME 339)

K. M. Isaac MAEEM Dept., UMR

Note:

At time t=0 all values $u_{i,0} = f(x_i)$ are known (IC).

In eq.(15) if all $u_{i,n}$ are known at time level tn, $u_{i,n+1}$ can be calculated explicitly.

Thus all the values at a time level (n+1) must be calculated before advancing to the next time level.

Note: If all IC and BC do not match at (0,0) and (l,0), it should be handled in the numerical procedure.

Select one or the other for the numerical calculation.

There will be a small error present because of this inconsistency.

8/31/2004

Topic 3 Discretization of PDE

K. M. Isaac MAEEM Dept., UMR

Convergence of Explicit Form.

Remember that the finite difference form is an approximation. The solution also will be an approximation.

The error introduced due to only a finite number of terms in the Taylor series is known as truncation error, ε .

The solution is said to converge if

$$\varepsilon \to 0$$
 when $\Delta x, \Delta t \to 0$

Error is also introduced because variables are represented by a finite number of digits in the computer. This is known as round-off error.

8/31/2004

Topic 3 Discretization of PDE

23

Computational Fluid Dynamics (AE/ME 339)

K. M. Isaac MAEEM Dept., UMR

For the explicit method, the truncation error, $\boldsymbol{\epsilon}$ is

$$\varepsilon = O[\Delta t]$$

The convergence criterion for the explicit method is as follows:

$$0 < \lambda \le \frac{1}{2}$$
 where $\lambda = \frac{\Delta t}{(\Delta x)^2}$
