North-Holland Mathematics Studies, Volume 202:
# Half-Linear Differential Equations
By O. Došly and P. Řehák

SPECIAL DISCOUNT ORDER FORM

Short Description:

The book presents a systematic and compact treatment of the qualitative theory of half-linear differential equations. It contains the most updated and comprehensive material and represents the first attempt to present the results of the rapidly developing theory of half-linear differential equations in a unified form. The main topics covered by the book are oscillation and asymptotic theory and the theory of boundary value problems associated with half-linear equations, but the book also contains a treatment of related topics like PDE's with p-Laplacian, half-linear difference equations and various more general nonlinear differential equations.

Contents:

Preface
1. Basic Theory
2. Methods of Oscillation Theory.
3. Oscillation and Nonoscillation Criteria.
4. Nonoscillatory Solutions.
5. Various Oscillation Problems.
6. BVP's for Half-Linear Differential Equations.
7. Partial Differential Equations with p-Laplacian.
8. Half-Linear Difference Equations.
9. Related Differential Equations and Inequalities.
Bibliography.
Index.
Author Index.
