Please answer as many or as few of these questions as you wish. Use the back or additional pages if you need more room.

1. The emphasis of the class was supposed to be on how mathematics helps understand the underlying physics. Which part of the class best did this?

2. Which part of the class did the worst job of doing this?

3. What was the best thing about this class?

4. What was the worst thing about this class?

5. What should be done the same the next time the class is taught?

6. What should be done differently the next time the class is taught?

7. Suppose you were assigned to teach this class (and had the necessary knowledge of physics and mathematics). List some things YOU would do.

8. Any other comments, suggestions, criticisms?
