

Rigid Body $F=ma$ Intro (Gen Plane): Example 1

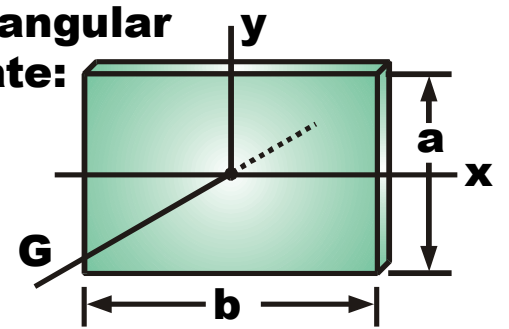

(This is a general intro problem to the RB motion equations)

A 40 lb, 2 ft square plate rests on a frictionless surface. Two forces ($F_x = 15$ lb and $F_y = 10$ lb) are applied to it as shown.

Please determine the plate's: (a) a_{Gx} ; (b) a_{Gy} ; (c) α .

**Rectangular
Plate:**

$$I_G = \frac{1}{12} m(a^2 + b^2)$$
