 - PI Total: \$1,239,176
- Established research, workforce training, and recruiting relationships with Los Alamos National Laboratory (LANL), first as a LANL Guest Scientist and subsequently as a LANL University Collaboration Scientist. Co-founded the LANL/S&T Cyber Security Sciences Institute (CSSI) in 2013 which has received \$528K so far in research contracts. The CSSI research is focused on solving complex security problems inherent to enterprise computer networks employing computational intelligence approaches, including coevolutionary approximations of game theory and novel hyper-heuristic techniques. Gave invited talks at LANL in 2012 & 2013.
- Established research, education, and recruiting relationships with Sandia National Laboratories, first as Summer Faculty in Sandia's Center for Cyber Defenders, subsequently as S&T's campus coordinator for Sandia's recruiting efforts, in Academic Year 2014-2015 as Sabbatical Faculty in residence at Sandia, and continuing as contract scientist. Received \$545K so far in research contracts for research spanning computational intelligence techniques applied to cyber security and critical infrastructure protection and hyper-heuristics for automated algorithm design and automated code targeting for diverse computational architectures. Gave invited talks at Sandia in 2005, 2012, 2013, 2014, and 2015.
- Founded the Natural Computation Laboratory (NC-LAB) which since its founding in 2002 has concentrated on the development of novel types of Evolutionary Algorithms (EAs) and hyper-heuristics, and their application to real-world problems, in particular in the area of cyber security. The bulk of the NC-LAB funding has come from Sandia National Laboratories (SNL), Los Alamos National Laboratory (LANL), and the National Science Foundation (NSF). This is a controlled access lab for performing export controlled research. The vast majority of the lab's contracts from Sandia and LANL have been export controlled.
- Assumed leadership roles in the ACM SIGEVO community, as Late Breaking Papers Chair at the 2010 ACM SIGEVO Genetic and Evolutionary Computation Conference (GECCO 2010), Genetic Algorithms Track Co-Chair at GECCO 2012 & 2013, co-founder of the Combinatorial Black Box Optimization Competition (CBBOC), first held at GECCO 2015 and repeated at GECCO 2016, co-chair of the Workshop on Evolutionary Computation for the Automated Design of Algorithms (ECADA) held at GECCO since 2015, co-chair of the 2nd Workshop on Metaheuristic Design Patterns (MetaDeeP) at GECCO 2015, and co-instructor of the Hyper-heuristics Tutorial offered annually at GECCO since 2015.

Academic Activities

Course Development

- 2006-2008** Evolutionary Computing (CS 5401/6401 - formerly 348/448) - created a two-course sequence on evolutionary computing, consisting of a senior/graduate introductory course and an advanced, research emphasized, graduate course building on foundations laid in the intro course.
- 2006** Computer Security (CS 483) - completely revamped as an advanced graduate course centered around problem-based learning (PBL) in teams.
- 2004** Discrete Mathematics for Computer Science (CS 1200 - formerly 128/158) - instituted a LEAD Learning Center. In Spring Semester 2005 expanded this Learning Center to all sections and coordinated shared responsibility for it with the other section instructors.
- 2003** Introduction to Artificial Intelligence (CS 5400 - formerly 347) - completely revamped to provide in-depth, hands-on overview of search algorithms and heuristics with a major implementation component in a modern programming language; programming assignments in the second half of a semester progressively prepare the students for the S&T Artificial Intelligence Tournament.
- 2002** Advanced graduate course on Evolutionary Computing (CS 6401 - formerly 448) - provided an introduction to the general theory of Evolutionary Computing followed by individual research projects in which students implemented Evolutionary Algorithms, a number of which led to M.S. theses and conference papers. Besides traditional lectures, in-class case studies were performed in groups, and students gave presentations on their individual research projects.
