Physics 1135     Asynchronous online lecture section 1CC

Lecture section 1CC is an online section. We are offering the lectures in an asynchronous way. Lectures will be available on the course website by 9pm the evening before, and will remain available throughout the semester. The online lectures present exactly the same material as the live lectures. The introductory segment contains all important announcements.

You need to watch the lectures on the scheduled class day, i.e. each Tuesdays and Thursdays, because the homework about that material is due on the following day in recitation, but you can choose any time that is convenient for you. Since you should watch the lectures before you begin your homework, we suggest that you try to schedule some time earlier in the day so that you can take full advantage of the Physics Learning Center we are offering on Tuesday and Thursday afternoons and evenings.

Quizzes will be given in most weeks and may cover material from the reading assignment for one or both lectures given during that week. If you are enrolled in the online lecture section, you will complete the quizzes through Canvas. They will be available by Thursday 9am and must be completed by Friday 9am. Please make sure to check for a quiz on Canvas every Thursday, beginning on January 19. In addition to the regular weekly quizzes, there will be a Syllabus Quiz, which is due by Thursday, 1/19, 9am, as listed in the schedule of assignments.

Because we consider in-person interaction with faculty to be a major contributor to student success, all Physics 1135 students are required to attend in-seat recitations and laboratories. For additional in-person interaction with faculty and class mates, we invite you to join us in the Physics Learning Center Tuesdays and Thursdays, 2:00-4:30pm and 6:00-8:30pm.
