Sample Questions for Chem 1319 Final FS14

1. MSDS (the rest listed on review):
   a. Proper attire –
   b. Acid Spill –
   c. Bunsen Burners –
   d. Phenolphthalein –

2. Heat of Neutralization:
   A reaction of 100mL of 1.35M HCl and 100mL of 1.76M NaOH is monitored and the following temperatures were recorded: starting temperature = 24.6 °C; and final temperature = 38.8 °C. Calculate the \( \Delta H \) of this reaction.

   Given:  \( C_p \) of solution \( (J/K) = 4.13 \frac{J}{g \cdot K} \times \text{Volume of solution in mL} \)

   \( C_p \) of calorimeter \( (J/K) = 50 \)

   \( Q = (-\text{total } C_p \times \Delta T) \)

   \( \Delta H = Q/n \)

   a. Determine the change in temperature for the system.

   b. Determine the \( C_p \) of the solution \( (J/K) \).

   c. Determine the total \( C_p \) of the system.

   d. Determine the number of moles of the acid and the base. Which is the limiting reagent?

   e. Determine the Heat Transfer, \( Q \), for the reaction.

   f. Determine the change in enthalpy, \( \Delta H \), for the reaction.
3. **Heat of Fusion.** An ice cube with mass 9.53 grams (presume \( T_i = 0 \, ^\circ\text{C} \)) is placed in a calorimeter containing 111.24 grams of distilled water at a temperature of 23.2 \(^\circ\text{C} \). After equilibration, the final temperature was 15.8 \(^\circ\text{C} \).

Given:  
\[ \Delta H_{\text{total}} = \Delta H_{\text{ice}} + \Delta H_{\text{water}} + \Delta H_{\text{calorimeter}} + \Delta H_{\text{fus}} = 0 \]

\[ \Delta H_{\text{water}} (\text{J}) = C_{p,\text{H}_2\text{O}} \times (\text{mass}) \times \Delta T \]
\[ \Delta H_{\text{ice}} (\text{J}) = C_{p,\text{ice}} \times (\text{mass}) \times \Delta T \]
\[ H_{\text{calorimeter}} (\text{J}) = C_{p,\text{Cal}} \times \Delta T \]

\( C_{p,\text{H}_2\text{O}} = 4.18 \, \text{J/}(\text{g} \cdot ^\circ\text{C}) \)  
\( C_{p,\text{Cal}} = 50 \, \text{J/}^\circ\text{C} \)

a. Determine the \( \Delta H_{\text{water}} \).

b. Determine the \( \Delta H_{\text{ice}} \). *(Hint for \( C_p \) – The ice has melted.)*

c. Determine the \( \Delta H_{\text{calorimeter}} \).

d. Determine the \( \Delta H_{\text{fus}} \) for one gram of ice. *(Hint: For a calorimeter (i.e., closed systems) \( \Delta H_{\text{total}} = 0 \))*

4. **General Thermochemistry Concepts** – a-d.) *Circle appropriate answer. e-h.) Define.*

a. If heat transfers from the system (solute) to the surroundings (solvent), then \( \Delta H \) is negative (\( \Delta H < 0 \)), and the reaction is defined as (endothermic / exothermic) and the temperature of the solvent will go (up / down).

b. If heat transfers from the surroundings (solvent) to the system (solute), then \( \Delta H \) is positive (\( \Delta H > 0 \)), and the reaction is defined as (endothermic / exothermic) and the temperature of the solvent will go (up / down).

c. The heat of neutralization experiment was an (endothermic / exothermic) reaction.

d. The heat of fusion experiment was an (endothermic / exothermic) reaction.

e. This term means “the techniques that are used to measure enthalpy”:

f. This term means “the energy needed to raise the temperature of an object 1\(^\circ\) C”:

g. This term means “the energy needed to raise the temperature of one gram of a substance 1\(^\circ\) C”:

h. Heat capacity is an extrinsic property. Define intrinsic and extrinsic properties and give an example of each.
5. **Radioactive Decay:**

   a. Safety precautions: Types of radiation (listed below) are stopped by what type of material?
      
      - alpha
      - beta
      - gamma
      - neutron

   b. Determine if alpha or beta, then balance the following radioactive decay equations:

   \[
   ^{222}_{86}\text{Rn} \rightarrow _____ + ^{4}_{2}\text{He}
   \]

   \[
   ^{234}_{90}\text{Th} \rightarrow _____ + ^{0}_{-1}\text{e} + anti-\nu
   \]

   c. Determine the specific decay constant, initial activity and half-life of a radioactive isotope. Given the equations:

   \[ A = A_0e^{kt} \]

   \[ \ln A = -kt + \ln A_0 \]

   \[ \ln 2 = 0.693 \]

   \[ t_{\frac{1}{2}} = \ln 2 / k \]

   \[ y = mx + b \]

   \[ m = (y_2 - y_1) / (x_2 - x_1) \]

   and the data:

<table>
<thead>
<tr>
<th>Time, minutes</th>
<th>Counts/Min</th>
<th>ln (Counts/Min)</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>14472</td>

</tbody>
</table>

   1. Determine the specific decay constant, \( k \), for this radioactive decay.

   2. Determine the initial activity, \( A_0 \).

   3. Determine the half-life.
6. Antacids: You are given 1.12 M HCl and 1.48 M NaOH. The antacid you use contains 300 mg of CaCO$_3$ and 100 mg of Al(OH)$_3$. If the antacid dissolved in 35.0 ml of HCl and was then back titrated with 21.8 ml of NaOH, find the following:

a. The original number **mmoles of HCl** used to dissolve the antacid and neutralize the base.

b. The number of **mmoles of NaOH** used to back titrate the acid.

c. The number of **mmoles of acid** used to neutralize only the antacid (a.k.a. the excess HCl).

d. Write the **balanced equations** for the neutralization of the antacid (Both CaCO$_3$ and Al(OH)$_3$).

e. Using the **number of mg in the tablet**, calculate the mmoles of each component (Both CaCO$_3$ and Al(OH)$_3$).

f. Based on the **mmoles of each component**, calculate the theoretical number of mmoles of HCl that should have been needed to neutralize the antacid. (*Hint: Use the mole ratios.*)

g. What was the **total number of theoretical mmoles of HCl** that should have been neutralized?

h. Calculate the **percent error** in order to compare the theoretical (g.) to the actual (c.). What are possible reasons this discrepancy could have occurred?
7. **Spectrophotometry:** Using a Spectrophotometer (Spec 20), a student recorded below the Percent Transmittance data for the following solutions:

<table>
<thead>
<tr>
<th></th>
<th>400 nm</th>
<th>450 nm</th>
<th>500 nm</th>
<th>550 nm</th>
<th>600 nm</th>
<th>650 nm</th>

<td>79.3</td>
<td>72.5</td>
<td>35.5</td>
<td>85.8</td>
<td>45.5</td>
<td>65.3</td>
</tr>
</tbody>
</table>

a. Calculate the Absorbance for each of the %T listed above.

<table>
<thead>
<tr>
<th></th>
<th>400 nm</th>
<th>450 nm</th>
<th>500 nm</th>
<th>550 nm</th>
<th>600 nm</th>
<th>650 nm</th>

</tbody>
</table>

b. Determine the following from the data calculated in Part 1 (2 pts):

   - Red Dye Max. Absorbance = ______ at ______ nm \((\lambda_{\text{Max}})\)
   - Blue Dye Max. Absorbance = ______ at ______ nm \((\lambda_{\text{Max}})\)

c. Calculate the Absorbance Ratio of the Unknown/Standard at \((\lambda_{\text{Max}})\).

d. Calculate the Dye Concentration in the Unknown. *(Standard Concentrations given above.)*

<table>
<thead>
<tr>
<th></th>
<th>Abs of Unknown (at (\lambda_{\text{Max}}))</th>
<th>Abs of Standard (at (\lambda_{\text{Max}}))</th>
<th>Abs Ratio Unk/Std (at (\lambda_{\text{Max}}))</th>
<th>Dye Conc. in Unknown</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Red in Purple</strong></td>

<td></td>
<td></td>
</tr>
</tbody>
</table>

8. **Colorimetry:** Using the well strips below, the student put the following number of drops in the wells. In strips I & II, 1-8 drops of blue dye standard solution \((5.05 \text{ ppm})\) were added as shown in the diagram. In strip II, additional drops of water were added in order to have the same total volume of 8 drops for each well.

![Well strips diagram](image)

Given: The student found that the unknown solution of blue dye matched well #7 on Strip II.

a. What is changing in the first well strip – concentration or pathlength?

b. What is changing in the second well strip – concentration or pathlength?

c. Looking from the top how does the intensity compare for Strip 1 to Strip 2?
   - more intense – the same – less intense

d. Using \(C_1V_1 = C_2V_2\), what is the approximate concentration in ppm for the unknown?
9. **Atomic Spectra**: Using the Rydberg equation (where \( R = 3.29 \times 10^{15} \text{ Hz} \) and the speed of light \( C = 2.998 \times 10^8 \text{ m/s} \)):
   
   a. Calculate the expected frequencies in Hertz (s\(^{-1}\)) of the radiation emitted by a hydrogen atom for the following electronic transitions.
   
   \[
   \nu = R\left(\frac{1}{n_1^2} - \frac{1}{n_2^2}\right)
   \]
   
   b. Calculate the expected wavelengths in nanometers (nm) of the radiation emitted by a hydrogen atom for the same electronic transitions.
   
   \[C = \lambda\nu\]
   
   c. Label which wavelengths correspond to the Balmer series and which wavelengths correspond to the Lyman series.

<table>
<thead>
<tr>
<th>Transitions</th>
<th>Frequency (s(^{-1}))</th>
<th>Wavelength (nm)</th>
<th>Balmer / Lyman</th>
</tr>
</thead>
<tbody>

<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>( n_2 = 4 &amp; n_1 = 2 )</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>( n_2 = 3 &amp; n_1 = 2 )</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

   d. Why did the Hydrogen spectrum have the fewest lines?

   e. For the Hydrogen spectra, why was the red line more intense (brighter) than the other lines?

10. **Flame Tests** – What color flame is produced by each of the following elements?
   
   a. copper –
   b. iron –
   c. lithium –
   d. potassium –
   e. magnesium –
   f. sodium –

11. **Periodic Properties** – What are the periodic trends of the following elements?
   
   a. Magnesium – Aluminum – Silicon
      - with water
      - with acid
      - with base
   
   b. Magnesium – Calcium
      - with water
      - with acid
      - with base
12. Equilibrium Constant & Beer’s Law:

1. Why is it important that you avoid any loss of solutions when transferring and measuring solutions in an equilibrium experiment similar to the one done in class?

2. According to the Beer’s Law equation, A = abc. Why is it you did not need to know the value for the molar absorptivity constant or the pathlength for the calculations you did in this experiment?

3. While doing the Beer’s Law experiment, Bob and his lab partner used ~5ml of solution for each determination of the %T. Their classmate Suzy and her lab partner used ~10ml of solution for each determination. Explain briefly what differences if any would result from doubling the amount of solution.

4. While doing a Beer’s Law experiment, Frank thought that he would run out of solution. Rather than go get more from the hood. He diluted his original solution to half its original concentration. How would this effect his absorbance readings compared to a student who had used the solution with the original concentration?

5. Trina’s lab partner generated the following graphs for her and told her to finish the lab on her own.

Looking at the graphs,

a.) Determine the Keq for this reaction.

b.) Determine the concentration of an unknown solution when %T = 61.1.
(Assume the pathlength was 1.00cm.)
13. **Gas Laws:** Using the ideal gas law, calculate the volume of the system.

**Given:** pressure = 738 mmHg, mass = 0.725 grams, MW_{butane} = 58.000 g/mole, T = 20°C, R = 0.08206 Latm/molK

a. What is the number of moles of butane?

b. What is the pressure in atm?

c. What is the temperature in K?

d. What is the volume of the system?

e. What would the volume be at STP?

14. **Statistics:**

a. For the following data set (2.10, 3.20, 3.50, 4.90, 4.30, 2.90) find the mean (average).

b. For the average of the data set above, calculate the % Error if the expected answer was 3.50.

b. For this data set would you calculate the standard deviation or the standard deviation estimate? Explain why.

15. **Dimensional Analysis:**

a. Choose problems from sets 1, 2, 4 or 5 and work them.

b. Dimensional analysis problems are generally incorporated within the other problems.

For example:

1. Converting from mg to mmole in the antacid problem.
2. Converting from mmHg to torr or atm in the gas laws problem.
3. Converting from °C to K in the gas laws problem.
16. Scientific Notation & Significant Figures:
   a. Choose problems from sets 1 & 2 and work them.
   b. Review problems similar to those on the midterm exam. (*Monday exam questions shown below.*)

   24. What is the numerical value of $5.000 \times 10^2$?
      a. 0.05  b. 0.05000  c. 500.0  d. 500

   25. How many significant figures are there in the number 0.030170?
      a. 4  b. 5  c. 6  d. 7

   26. Which of the following numbers has 3 significant figures?
      a. 0.0290  b. 0.4160  c. 508.0  d. 29.10

   27. Using the correct number of significant figures, what is the answer to 1453.2-6.58 g?
      a. 1450 g  b. 1447 g  c. 1446.6 g  d. 1446.62 g

   28. Using the correct number of significant figures, what is the answer when 6.5 is multiplied by 0.0341?
      a. 0.222  b. 0.2217  c. 0.2  d. 0.22

   29. Find the number of moles in 50.00g of carbon dioxide, CO$_2$.
      a. $6.840 \times 10^{-23}$  b. 44.01  c. 1.136  d. 0.8802

17. Glassware and equipment: Identify the equipment below.
18. **Nomenclature:** List the chemical names for the chemicals below.

a. HCl  
b. NaOH  
c. Al(OH)$_3$  
d. MgCO$_3$  
e. CaCO$_3$  
f. NaHCO$_3$  
g. CH$_3$COOH  
h. Fe(NO$_3$)$_3$  
i. KSCN

19. **People – How did these people contribute to the experiments we did in Chem 2?**

(All powerpoints are available at http://web.mst.edu/~tbone)

a. Henri Becquerel (Nuclear)  
b. Svante Arrhenius (Antacid)  
c. Johannes Nicolaus Bronsted and Thomas Martin Lowry (Antacid)  
d. Gilbert N. Lewis (Antacid)  
e. August Beer & Johann Heinrich Lambert (Equilibrium)  
f. Henry Louis Le Chatelier (Equilibrium)  
g. Ibn Alhazen (Atomic Spectra)  
h. Galileo Galilei (Atomic Spectra)  
i. Sir Isaac Newton (Atomic Spectra)  
j. Joseph von Fraunhofer (Atomic Spectra)  
k. Bunsen & Kirchhoff (Atomic Spectra)  
l. Johann Balmer (Atomic Spectra)  
m. Max Planck (Atomic Spectra)  
n. Albert Einstein (Nuclear)  
o. Neils Bohr (Atomic Spectra)  
p. Robert Boyle (Gas Laws)  
q. Jacques-Alexandre Charles (Gas Laws)  
r. Amedeo Avogadro (Gas Laws)  
s. Joseph-Louis Gay-Lussac (Gas Laws)  
t. John Dalton (Gas Laws)  
u. Johannes Diderik van der Waals (Gas Laws)  
v. My TA’s name is…

B1 – Shreyas Bhandare  
C1, G1, N1 – Runmiao Xue  
D2, H1, Q1 – Liz Bowles  
F1, K1, P1 – Avinash Vadapalli  
H2, L2, Q2 – Parwani Rewatkar  
J2, T2 – Tahereh Tagvahee Yazdeli  

B2, D1, E1, L1 – Dava Mentis  
C2, G2, N2 – Xi Cao  
E2, M1, U1 – Kyle Anderson  
F2, K2, P2 – Peng Geng  
J1, R1, T1 – Pengpeng Hu  
M2, R2, U2 – Fei Zheng

**Note:** Most of the questions on the final will be similar to those on review and/or on quizzes.
