

MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Chapter 4

Interest Rates

9/11/2024 Math 5737/Econ 5337, Fall 2024 36

36

MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Remark 4.1

Types of rates are:

- Treasury rates (government, virtually risk free)
- LIBOR rates (1/3/6/12-month in all major currencies, not totally risk free)
- Repo-rates (very little credit risk)

9/11/2024 Math 5737/Econ 5337, Fall 2024 37

37

MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Definition 4.2

Let $V(t)$ be the wealth at time t (years).
 We talk about **discrete** or **periodic compounding** with **frequency** m times a year and interest rate r per annum provided
 $V(t) = V(0)(1+r/m)^{mt}$ for all $t \geq 0$.
 $(1+r/m)^{mt}$ is called the **growth factor**,
 $(1+r/m)^{-mt}$ is called the **discount factor**.

9/11/2024 Math 5737/Econ 5337, Fall 2024 38

38

MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Example 4.3

- Let $r=0.1$. Find the value of \$100 after 1 year with periodic compounding and $m=1, 2, 4, 12, 52, 365$.
- How long does it take to double a capital attracting interest at 6% daily?
- What is r if a deposit subject to annual compounding is doubled after 10 years?

9/11/2024 Math 5737/Econ 5337, Fall 2024 39

39

MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Example 4.3 (continued)

- How long will it take to earn \$1 if $r=0.1$ (a.c.) and $V(0)=1$ cent?
- Pay \$1000 every year after 1, 2, and 3 years. What is the present value of this payment stream? Use annual compounding at 25%.

9/11/2024 Math 5737/Econ 5337, Fall 2024 40

40

MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Definition 4.4

An **annuity** is a sequence of finitely many payments of a fixed amount due at equal time intervals.

9/11/2024 Math 5737/Econ 5337, Fall 2024 41

41

MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Proposition 4.5

For discrete annual compounding with rate r and payments of C every year, the present value of an annuity for n years is

$$C(1-(1+r)^{-n})/r.$$

9/11/2024 Math 5737/Econ 5337, Fall 2024 42

42

MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Example 4.6

Consider a loan of \$1000 to be paid back in 5 equal installments due at yearly intervals. The installments include both the interest payable each year calculated at 15% of the current outstanding loan and the repayment of a fraction of the loan (**amortized loan**).

9/11/2024 Math 5737/Econ 5337, Fall 2024 43

43

MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Example 4.7

Suppose that you took a mortgage of \$100,000 on a house to be paid back in 10 equal annual payments ($r=6\%$). If you decided to clear the mortgage after 8 years, how much would you need to pay on top of the 8th installment?

9/11/2024 Math 5737/Econ 5337, Fall 2024 44

44

MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Definition 4.8

A **perpetuity** is an infinite sequence of equal payments due at equal time intervals.

9/11/2024 Math 5737/Econ 5337, Fall 2024 45

45

MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Proposition 4.9

For discrete annual compounding with rate r and payments of C every year, the present value of a perpetuity is

$$C/r.$$

9/11/2024 Math 5737/Econ 5337, Fall 2024 46

46

MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Definition 4.10

We talk about **continuous compounding** at rate r provided

$$V(t) = V(0)e^{rt} \text{ for all } t \geq 0.$$

e^{rt} is called the **growth factor**,
 e^{-rt} is called the **discount factor**.

9/11/2024 Math 5737/Econ 5337, Fall 2024 47

47

MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Remark 4.11

Under continuous compounding, the rate of growth of the wealth is proportional to the wealth:

$$V'(t) = rV(t).$$

9/11/2024 Math 5737/Econ 5337, Fall 2024 48

48

MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Example 4.12

- Let $r=0.1$. Find the value of \$100 after 1 year with continuous compounding.
- How long does it take to double a capital attracting interest at 6% c.c.?
- What is r if a deposit subject to continuous compounding is doubled after 10 years?

9/11/2024 Math 5737/Econ 5337, Fall 2024 49

49

MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Example 4.12 (continued)

- How long will it take to earn \$1 if $r=0.1$ (c.c.) and $V(0)=\$1$ million?
- Pay \$1000 every year after 1, 2, and 3 years. What is the present value of this payment stream? Use continuous compounding at 25%.

9/11/2024 Math 5737/Econ 5337, Fall 2024 50

50

MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Definition 4.13

- Two compounding methods are called **equivalent** if the corresponding growth factors over a period of one year are the same.
- If one of the growth factors is bigger, then that method is called **preferable**.

9/11/2024 Math 5737/Econ 5337, Fall 2024 51

51

MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Example 4.14

- What is the equivalent continuous rate for 10% semiannual compounding?
- What is the equivalent quarterly rate for 8% continuous compounding?

9/11/2024 Math 5737/Econ 5337, Fall 2024 52

52

MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Definition 4.15

For a given compounding method, the **effective rate** r_e is the rate for annual compounding equivalent to that method.

9/11/2024 Math 5737/Econ 5337, Fall 2024 53

53

MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Example 4.16

- What is the effective rate for semiannual compounding with $r=10\%$?
- What is the effective rate for continuous compounding with $r=10\%$?

9/11/2024 Math 5737/Econ 5337, Fall 2024 54

54

MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Definition 4.17

A **zero-coupon bond** involves a single payment, and the issuing institution promises to exchange the bond for its **face value (principal value)** at a given **maturity date**.

9/11/2024 Math 5737/Econ 5337, Fall 2024 55

55

MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Example 4.18

- Suppose a bond has face value $F=100$ and matures in 1 year. If $r=12\%$ (a.c.), find the present value of the bond.
- Find the interest rates for annual, semiannual, and continuous compounding implied by a **unit bond** with maturity 1 and value 0.9455 after half a year.

9/11/2024 Math 5737/Econ 5337, Fall 2024 56

56

MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Definition 4.19

A **coupon bond** promises a sequence of payments, consisting of the face value paid at maturity and coupons paid regularly, the last coupon being due at maturity.

9/11/2024 Math 5737/Econ 5337, Fall 2024 57

57

MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Example 4.20

Consider a bond with $F=100$, $T=5$, $C=10$ paid annually, $r=0.12$ continuously compounded. Find the value of this bond at times 0, 1, and 4.

9/11/2024 Math 5737/Econ 5337, Fall 2024 58

58

MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Proposition 4.21

For coupons paid annually and continuous compounding with constant rate r , the price of a bond with coupon value C , face value F , and maturity T years is

$$C(1-e^{-rT})/(e^r-1)+Fe^{-rT}.$$

9/11/2024 Math 5737/Econ 5337, Fall 2024 59

59

MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Definition 4.22

- Assuming that coupons are paid annually, $i=C/F$ is called the **coupon rate**.
- If the price of a bond is equal to its face value, we say the bond sells **at par**.
- The coupon rate that causes the bond to sell at par is called the **par yield**.

9/11/2024 Math 5737/Econ 5337, Fall 2024 60

60

MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Proposition 4.23

Assume that coupons are paid annually and interest rates are constant. Then the par yield is equal to the effective rate.

9/11/2024 Math 5737/Econ 5337, Fall 2024 61

61

MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Definition 4.24

The **bond yield** is the discount rate that, when applied to all cash flows, gives a bond price equal to its market price.

9/11/2024 Math 5737/Econ 5337, Fall 2024 62

62

MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Example 4.25

Suppose a 2-year Treasury bond with $F=100$ provides coupons at rate of 6% p.a. semiannually.

Maturity (years)	Treasury zero rate (%) c.c.
0.5	5.0
1.0	5.8
1.5	6.4
2.0	6.8

9/11/2024 Math 5737/Econ 5337, Fall 2024 63

63

MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Example 4.26

In this example we discuss the most popular approach to calculate Treasury zero rates from the prices of Treasury bonds, the **bootstrap method**.

9/11/2024 Math 5737/Econ 5337, Fall 2024 64

64

MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Example 4.26 (continued)

Bond principal (\$)	Time to maturity (years)	Annual coupon (\$)	Bond price (\$)
100	0.25	0	97.5
100	0.50	0	94.9
100	1.00	0	90.0
100	1.50	8	96.0
100	2.00	12	101.6

9/11/2024 Math 5737/Econ 5337, Fall 2024 65

65

MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Definition 4.27

The **forward rate** is the future zero rate implied by today's term structure of zero interest rates.

9/11/2024 Math 5737/Econ 5337, Fall 2024 66

66

MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Example 4.28

Find the forward rates for the nth year (% p.a.).

Year (n)	Zero rate for an n-year investment (% p.a.)
1	3.0
2	4.0
3	4.6
4	5.0
5	5.3

9/11/2024 Math 5737/Econ 5337, Fall 2024 67

67

MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Proposition 4.29

Assume R_1 and R_2 are the zero rates for maturities T_1 and T_2 . Then the forward rate R_F between T_1 and T_2 is given by

$$R_F = (R_2 T_2 - R_1 T_1) / (T_2 - T_1).$$

9/11/2024 Math 5737/Econ 5337, Fall 2024 68

68

MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Definition 4.30

A **forward rate agreement (FRA)** is an agreement that a certain rate will apply to a certain principal during a certain future period.

9/11/2024 Math 5737/Econ 5337, Fall 2024 69

69

MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Example 4.31

Suppose company X enters into an FRA with Y that specifies that it will receive a fixed rate of $R_k=4\%$ on a principal of $L=1$ million for a 3-month period starting in 3 years. The actual 3-month LIBOR proves to be $R_M=4.5\%$. Find the cash flow to Y.

9/11/2024 Math 5737/Econ 5337, Fall 2024 70

70

MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Example 4.32

Suppose rates are as Example 4.28. Consider an FRA where we will receive $R_k=6\%$ (annual compounding) on $L=1$ million between times 1 and 2. Note $R_F=5\%$ is the forward rate calculated today. Find the present value of the FRA.

9/11/2024 Math 5737/Econ 5337, Fall 2024 71

71

MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Definition 4.33

The **duration** of a bond with price B and yield y that provides cash flow c_i at time t_i , $1 \leq i \leq n$, is defined by

$$D = \frac{\sum_{i=1}^n t_i c_i e^{-yt_i}}{B}$$

9/11/2024 Math 5337/Econ 5337, Fall 2024 72

72

MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Example 4.34

Consider a 3-year 10% coupon bond (paid semiannually) with $F=100$, $y=0.12$ cc. Find the **duration** of the bond.

9/11/2024 Math 5337/Econ 5337, Fall 2024 73

73

MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Remark 4.35

- A zero-coupon bond has duration $t_n=T$
- Duration is a measure of how long on average the holder has to wait before receiving cash payments
- D is a convex combination of payment times
- Express ΔB in terms of D

9/11/2024 Math 5337/Econ 5337, Fall 2024 74

74

MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Example 4.36

Consider a 3-year 10% coupon bond (paid semiannually) with $F=100$, $y=0.12$ cc. Find the new bond price if the yield increases by ten **basis points**.

9/11/2024 Math 5337/Econ 5337, Fall 2024 75

75
