Definition 1.4

There are three types of traders:

- **Hedgers** attempt to reduce exposure to risk a company already faces
- **Speculators** invest available funds opportunistically in the hope of making a profit
- **Arbitrageurs** try to lock in riskless profit

arbitrage: risk-free profit with no initial investment
no-arbitrage principle: arbitrage opportunities are absent

Definition 1.5

- A **forward contract** is an agreement to sell or buy an asset at a fixed date in the future (**delivery time**) for a price specified in advance (**forward price, delivery price**).
- The party selling the asset assumes what is termed a **short (forward) position**, while the party buying the asset enters into a **long (forward) position**.

Definition 1.5 (continued)

- It costs nothing to enter a forward contract. A forward contract can be contrasted to a **spot contract**, which is an agreement to buy or sell an asset today.

Example 1.6 (a)

Suppose that

- The spot price of $\frac{1}{4}$ oz gold is \$300
- The 1-year forward price of $\frac{1}{4}$ oz gold is \$340
- The 1-year interest rate is 5% p.a.

Definition 1.8

- A **European call option** is a contract giving the holder the right (but no obligation) to buy an asset (**the underlying**) for a price fixed in advance (**exercise price, strike price**) at a specified future time (**exercise time, expiry time, maturity**).
- A **European put option** is a contract giving the right to sell an asset for a certain strike price at a certain exercise time.

14

Missouri S&T MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Definition 1.8 (continued)

- An **American put or call option** can be exercised any time up to and including the **expiry time**.
- Since payoffs are nonnegative, a premium (the market price of the option) must be paid when acquiring an option.

Example 1.9

Suppose an investor owns 1000 Microsoft shares on August 12, 2022, \$292 per share is the current price. Suppose the investor is concerned about a possible share price decline in the next 2 months and wants protection. The investor could buy 10 put option contracts with strike price \$290 and expiration time October 21, 2022. Assume each option price is \$14. Ignore the time value of money.

Example 1.10

On August 21, 2022, European calls on Twitter stock with $K=40$ USD and $T=$ October 21, 2022 were traded at 6.50 USD at NASDAQ. Ignoring the time value of money, when will the investment bring profit?
