

MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Chapter 3

Hedging Strategies using Futures

Math 5737/Econ 5337, Fall 2022

23

MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Definition 3.1

- A **short hedge** is a hedge involving a short position in a futures contract
- A **long hedge** is a hedge involving a long position in a futures contract

Math 5737/Econ 5337, Fall 2022

24

MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Remark 3.2

- Short hedges are appropriate when you know you will sell the asset in the future
- Long hedges are appropriate when you know you will buy the asset in the future

Math 5737/Econ 5337, Fall 2022

25

MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Remark 3.2 (continued)

- Arguments for hedging: Minimizing risks arising from interest rates, exchange rates, and other market variables
- Arguments against hedging: Shareholders can do it themselves, risk may increase if competitors do not hedge, explaining a situation where there is a loss on the hedge and a gain on the underlying can be difficult

Math 5737/Econ 5337, Fall 2022

26

MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Definition 3.3

- The **basis** in a hedging situation is defined by $b_t = S_t - F_t$
- If b_t is increasing, we say that this is **strengthening** of the basis
- If b_t is decreasing, this is called **weakening** of the basis

Math 5737/Econ 5337, Fall 2022

27

MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Example 3.4

Assume a hedge is put in place at time 1 and closed out at time 2, $S_1=2.50$, $F_1=2.20$, $S_2=2.00$, $F_2=1.90$

- If hedger knows that asset will be sold at time 2, what is the effective price that is obtained for the asset with hedging?
- If hedger knows that asset will be purchased at time 2, what is the effective price that is paid for the asset with hedging?

Math 5737/Econ 5337, Fall 2022

28

MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Definition 3.5

- **Cross hedging** occurs if the asset underlying the futures price is not the same as the asset whose price is being hedged.
- The **hedge ratio** is the ratio of the size of futures contracts to the size of shares of the underlying held.
- The **minimum variance hedge ratio** h^* is the hedge ratio that results in the risk (measured by the variance) being minimal.

Math 5137/Exam 5137, Fall 2022

29

MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Theorem 3.6

$$h^* = \rho_{SF} \sigma_S / \sigma_F$$

where σ_S and σ_F are the standard deviations of ΔS and ΔF , respectively, and ρ_{SF} is the correlation coefficient between ΔS and ΔF .

Math 5137/Exam 5137, Fall 2022

30

MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Example 3.7

An airline expects to purchase 2 million gallons of jet fuel in one month and decides to use heating oil futures for hedging. One futures contract is on 42,000 gallons. It is given that the standard deviations of the changes in fuel price and in the futures price (per gallon) are 0.03 and 0.04, respectively, and the correlation coefficient between these two changes is 0.9.

Math 5137/Exam 5137, Fall 2022

31

MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Example 3.8

An airline expects to purchase 2 million gallons of jet fuel in one month and decides to use heating oil futures for hedging. One futures contract is on 42,000 gallons.

Math 5137/Exam 5137, Fall 2022

32

MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Example 3.8 (continued)

Year	Change in fuel price per gallon	Change in futures price per gallon
1	0.029	0.021
2	0.020	0.035
3	-0.044	-0.046
4	0.008	0.001
5	0.026	0.044
6	-0.019	-0.029
7	-0.010	-0.026
8	-0.007	-0.029
9	0.043	0.048
10	0.011	-0.006
11	-0.036	-0.036
12	-0.018	-0.011
13	0.009	0.019
14	-0.032	-0.027
15	0.023	0.029

Math 5137/Exam 5137, Fall 2022

33

MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Example 3.9

A **stock index** tracks changes in the value of a hypothetical portfolio of stocks. Futures contracts on stock indices are settled in cash.

Math 5137/Exam 5137, Fall 2022

34

MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Example 3.9 (continued)

The **beta** β of a portfolio is defined by

$$\beta_V = \rho_{VM} \sigma_V / \sigma_M$$

and it satisfies (Capital Asset Pricing Model)

$$\beta = (\mu_V - r_f) / (\mu_M - r_f).$$

Math 5733/Econ 5333, Fall 2022

35

MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Example 3.9 (continued)

We assume now:

- Value of S&P500 index: 1000
- Value of portfolio: 5,000,000
- Risk-free interest rate: $r_f = 4\%$ p.a.
- Dividend yield on index: 1% p.a.
- Beta of portfolio: $\beta = 1.5$
- One futures contract is \$1010 and for delivery of 250 times the index

Math 5733/Econ 5333, Fall 2022
