Mathematical Modelling and Control

Aims and Scope

Mathematical Modelling and Control (MMC) highlights contributions that represent significant advances in mathematical modelling and mathematical control in the field of science and engineering. The subjects include dynamical systems, differential equations, mathematical biology, complex networks, artificial intelligence, engineering processes, and other related topics. It provides an effective medium for research mathematicians and a way to quickly publish high-quality original papers, so as to convey the latest important progress in their professional field to colleagues and scientists in related disciplines. The journal is completely free of costs for publication.
