

MISSOURI S&T MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Chapter 4

Interest Rates

Math 5730/Econ 5337, Fall 2025

36

MISSOURI S&T MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Remark 4.1

Types of rates are:

- Treasury rates (government, virtually risk free)
- LIBOR rates (1/3/6/12-month in all major currencies, not totally risk free)
- Repo-rates (very little credit risk)

Math 5730/Econ 5337, Fall 2025

37

MISSOURI S&T MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Definition 4.2

Let $V(t)$ be the wealth at time t (years).
 We talk about **discrete** or **periodic compounding** with **frequency** m times a year and interest rate r per annum provided
 $V(t) = V(0)(1+r/m)^{mt}$ for all $t \geq 0$.
 $(1+r/m)^{mt}$ is called the **growth factor**,
 $(1+r/m)^{-mt}$ is called the **discount factor**.

Math 5730/Econ 5337, Fall 2025

38

MISSOURI S&T MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Example 4.3

- Let $r=0.1$. Find the value of \$100 after 1 year with periodic compounding and $m=1, 2, 4, 12, 52, 365$.
- How long does it take to double a capital attracting interest at 6% daily?
- What is r if a deposit subject to annual compounding is doubled after 10 years?

Math 5730/Econ 5337, Fall 2025

39

MISSOURI S&T MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Example 4.3 (continued)

- How long will it take to earn \$1 if $r=0.1$ (a.c.) and $V(0)=1$ cent?
- Pay \$1000 every year after 1, 2, and 3 years. What is the present value of this payment stream? Use annual compounding at 25%.

Math 5730/Econ 5337, Fall 2025

40

MISSOURI S&T MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Definition 4.4

An **annuity** is a sequence of finitely many payments of a fixed amount due at equal time intervals.

Math 5730/Econ 5337, Fall 2025

41

MISSOURI S&T MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Proposition 4.5

For discrete annual compounding with rate r and payments of C every year, the present value of an annuity for n years is

$$C(1-(1+r)^{-n})/r.$$

Math 5730/Econ 5337, Fall 2025 42

42

MISSOURI S&T MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Example 4.6

Consider a loan of \$1000 to be paid back in 5 equal installments due at yearly intervals. The installments include both the interest payable each year calculated at 15% of the current outstanding loan and the repayment of a fraction of the loan (**amortized loan**).

Math 5730/Econ 5337, Fall 2025 43

43

MISSOURI S&T MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Example 4.7

Suppose that you took a mortgage of \$100,000 on a house to be paid back in 10 equal annual payments ($r=6\%$). If you decided to clear the mortgage after 8 years, how much would you need to pay on top of the 8th installment?

Math 5730/Econ 5337, Fall 2025 44

44

MISSOURI S&T MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Definition 4.8

A **perpetuity** is an infinite sequence of equal payments due at equal time intervals.

Math 5730/Econ 5337, Fall 2025 45

45

MISSOURI S&T MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Proposition 4.9

For discrete annual compounding with rate r and payments of C every year, the present value of a perpetuity is

$$C/r.$$

Math 5730/Econ 5337, Fall 2025 46

46

MISSOURI S&T MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Definition 4.10

We talk about **continuous compounding** at rate r provided

$$V(t) = V(0)e^{rt} \text{ for all } t \geq 0.$$

e^{rt} is called the **growth factor**,
 e^{-rt} is called the **discount factor**.

Math 5730/Econ 5337, Fall 2025 47

47

MISSOURI S&T MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Remark 4.11

Under continuous compounding, the rate of growth of the wealth is proportional to the wealth:

$$V'(t) = rV(t).$$

Math 5730/Econ 5337, Fall 2025 48

48

MISSOURI S&T MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Example 4.12

- Let $r=0.1$. Find the value of \$100 after 1 year with continuous compounding.
- How long does it take to double a capital attracting interest at 6% c.c.?
- What is r if a deposit subject to continuous compounding is doubled after 10 years?

Math 5730/Econ 5337, Fall 2025 49

49

MISSOURI S&T MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Example 4.12 (continued)

- How long will it take to earn \$1 if $r=0.1$ (c.c.) and $V(0)=\$1$ million?
- Pay \$1000 every year after 1, 2, and 3 years. What is the present value of this payment stream? Use continuous compounding at 25%.

Math 5730/Econ 5337, Fall 2025 50

50

MISSOURI S&T MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Definition 4.13

- Two compounding methods are called **equivalent** if the corresponding growth factors over a period of one year are the same.
- If one of the growth factors is bigger, then that method is called **preferable**.

Math 5730/Econ 5337, Fall 2025 51

51

MISSOURI S&T MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Example 4.14

- What is the equivalent continuous rate for 10% semiannual compounding?
- What is the equivalent quarterly rate for 8% continuous compounding?

Math 5730/Econ 5337, Fall 2025 52

52

MISSOURI S&T MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Definition 4.15

For a given compounding method, the **effective rate** r_e is the rate for annual compounding equivalent to that method.

Math 5730/Econ 5337, Fall 2025 53

53

MISSOURI S&T MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Example 4.16

- What is the effective rate for semiannual compounding with $r=10\%$?
- What is the effective rate for continuous compounding with $r=10\%$?

Math 5730/Econ 5337, Fall 2025

54

MISSOURI S&T MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Definition 4.17

A **zero-coupon bond** involves a single payment, and the issuing institution promises to exchange the bond for its **face value (principal value)** at a given **maturity date**.

Math 5730/Econ 5337, Fall 2025

55

MISSOURI S&T MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Example 4.18

- Suppose a bond has face value $F=100$ and matures in 1 year. If $r=12\%$ (a.c.), find the present value of the bond.
- Find the interest rates for annual, semiannual, and continuous compounding implied by a **unit bond** with maturity 1 and value 0.9455 after half a year.

Math 5730/Econ 5337, Fall 2025

56

MISSOURI S&T MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Definition 4.19

A **coupon bond** promises a sequence of payments, consisting of the face value paid at maturity and coupons paid regularly, the last coupon being due at maturity.

Math 5730/Econ 5337, Fall 2025

57

MISSOURI S&T MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Example 4.20

Consider a bond with $F=100$, $T=5$, $C=10$ paid annually, $r=0.12$ continuously compounded. Find the value of this bond at times 0, 1, and 4.

Math 5730/Econ 5337, Fall 2025

58

MISSOURI S&T MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Proposition 4.21

For coupons paid annually and continuous compounding with constant rate r , the price of a bond with coupon value C , face value F , and maturity T years is

$$C(1-e^{-rT})/(e^r-1)+Fe^{-rT}.$$

Math 5730/Econ 5337, Fall 2025

59

MISSOURI S&T MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Definition 4.22

- Assuming that coupons are paid annually, $i=C/F$ is called the **coupon rate**.
- If the price of a bond is equal to its face value, we say the bond sells **at par**.
- The coupon rate that causes the bond to sell at par is called the **par yield**.

Math 5737/Econ 5337, Fall 2025 60

60

MISSOURI S&T MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Proposition 4.23

Assume that coupons are paid annually and interest rates are constant. Then the par yield is equal to the effective rate.

Math 5737/Econ 5337, Fall 2025 61

61

MISSOURI S&T MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Definition 4.24

The **bond yield** is the discount rate that, when applied to all cash flows, gives a bond price equal to its market price.

Math 5737/Econ 5337, Fall 2025 62

62

MISSOURI S&T MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Example 4.25

Suppose a 2-year Treasury bond with $F=100$ provides coupons at rate of 6% p.a. semiannually.

Maturity (years)	Treasury zero rate (%) c.c.
0.5	5.0
1.0	5.8
1.5	6.4
2.0	6.8

Math 5737/Econ 5337, Fall 2025 63

63

MISSOURI S&T MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Example 4.26

In this example we discuss the most popular approach to calculate Treasury zero rates from the prices of Treasury bonds, the **bootstrap method**.

Math 5737/Econ 5337, Fall 2025 64

64

MISSOURI S&T MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Example 4.26 (continued)

Bond principal (\$)	Time to maturity (years)	Annual coupon (\$)	Bond price (\$)
100	0.25	0	97.5
100	0.50	0	94.9
100	1.00	0	90.0
100	1.50	8	96.0
100	2.00	12	101.6

Math 5737/Econ 5337, Fall 2025 65

65

MISSOURI S&T MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Definition 4.27

The **forward rate** is the future zero rate implied by today's term structure of zero interest rates.

Math 5737/Econ 5337, Fall 2025 66

66

MISSOURI S&T MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Example 4.28

Find the forward rates for the nth year (% p.a.).

Year (n)	Zero rate for an n-year investment (% p.a.)
1	3.0
2	4.0
3	4.6
4	5.0
5	5.3

Math 5737/Econ 5337, Fall 2025 67

67

MISSOURI S&T MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Proposition 4.29

Assume R_1 and R_2 are the zero rates for maturities T_1 and T_2 . Then the forward rate R_F between T_1 and T_2 is given by

$$R_F = (R_2 T_2 - R_1 T_1) / (T_2 - T_1).$$

Math 5737/Econ 5337, Fall 2025 68

68

MISSOURI S&T MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Definition 4.30

A **forward rate agreement (FRA)** is an agreement that a certain rate will apply to a certain principal during a certain future period.

Math 5737/Econ 5337, Fall 2025 69

69

MISSOURI S&T MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Example 4.31

Suppose company X enters into an FRA with Y that specifies that it will receive a fixed rate of $R_K=4\%$ on a principal of $L=1$ million for a 3-month period starting in 3 years. The actual 3-month LIBOR proves to be $R_M=4.5\%$. Find the cash flow to Y.

Math 5737/Econ 5337, Fall 2025 70

70

MISSOURI S&T MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Example 4.32

Suppose rates are as Example 4.28. Consider an FRA where we will receive $R_K=6\%$ (annual compounding) on $L=1$ million between times 1 and 2. Note $R_F=5\%$ is the forward rate calculated today. Find the present value of the FRA.

Math 5737/Econ 5337, Fall 2025 71

71

MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Definition 4.33

The **duration** of a bond with price B and yield y that provides cash flow c_i at time t_i , $1 \leq i \leq n$, is defined by

$$D = \frac{\sum_{i=1}^n t_i c_i e^{-y t_i}}{B}$$

Math 5730/Econ 5337, Fall 2025

72

MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Example 4.34

Consider a 3-year 10% coupon bond (paid semiannually) with $F=100$, $y=0.12$ cc. Find the **duration** of the bond.

Math 5730/Econ 5337, Fall 2025

73

MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Remark 4.35

- A zero-coupon bond has duration $t_n=T$
- Duration is a measure of how long on average the holder has to wait before receiving cash payments
- D is a convex combination of payment times
- Express ΔB in terms of D

Math 5730/Econ 5337, Fall 2025

74

MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY

Example 4.36

Consider a 3-year 10% coupon bond (paid semiannually) with $F=100$, $y=0.12$ cc. Find the new bond price if the yield increases by ten **basis points**.

Math 5730/Econ 5337, Fall 2025

75
