Preface

In this monograph we present recent work of last four years of the author in discrete and fractional analysis. It is the natural outgrowth of his related publications. Chapters are self-contained and can be read independently and advanced courses can be taught out of this book. An extensive list of references is given per chapter.

The topics covered are diverse. We introduce the right delta and right nabla fractional calculus on time scales. We continue with right delta and right nabla discrete fractional calculus in the Caputo sense. Then we give representations formulae of functions on time scales and we present Ostrowski type inequalities, Landau type inequalities, Grüss type and comparison of means inequalities, all these over the time scales. We continue with integral operator inequalities and their multivariate vectorial versions using convexity of functions again all these over time scales. It follows Grüss and Ostrowski type inequalities involving s -convexity of functions, we examine also the general case when we involve several functions. Then we present general fractional Hermite–Hadamard type inequalities using m -convexity and (s, m) -convexity. We finish monograph by introducing the reduction method in fractional calculus and study its connection to fractional Ostrowski type inequalities.

This book's results are expected to find applications in many areas of pure and applied mathematics, especially in difference equations and fractional differential equations. As such this monograph is suitable for researchers, graduate students, and seminars of the above subjects, also to be in all science libraries.

The preparation of book took place during 2014–2015 in Memphis, Tennessee, USA.

I would like to thank Professor Razvan Mezei, of Lenoir-Rhyne University, for checking and reading the manuscript.

Contents

<i>Preface</i>	v
1. Foundations of Right Delta Fractional Calculus on Time Scales	1
1.1 Background	1
1.2 Results	3
<i>Bibliography</i>	9
2. Principles of Right Nabla Fractional Calculus on Time Scales	11
2.1 Background	11
2.2 Results	13
<i>Bibliography</i>	19
3. About Right Delta Discrete Fractionality	21
3.1 Introduction and Background	21
3.2 Main Results	25
<i>Bibliography</i>	31
4. About Right Nabla Discrete Fractional Calculus	33
4.1 Introduction and Background	33
4.2 Main Results	38
<i>Bibliography</i>	45
5. Representations and Ostrowski Inequalities over Time Scales	47
5.1 Introduction	47
5.2 Main Results	48
5.3 Applications	81
<i>Bibliography</i>	87

6.	Landau Inequalities on Time Scales	89
6.1	Introduction	89
6.2	Background	89
6.3	Main Results	91
6.4	Applications	93
6.5	Addendum	94
	<i>Bibliography</i>	97
7.	Grüss and Comparison of Means Inequalities over Time Scales	99
7.1	Introduction	99
7.2	Main Results	100
7.3	Applications	119
	<i>Bibliography</i>	123
8.	About Integral Operator Inequalities over Time Scales	125
8.1	Introduction	125
8.2	Main Results	130
	<i>Bibliography</i>	151
9.	About Vectorial Integral Operator Inequalities Using Convexity over Time Scales	153
9.1	Background	153
9.2	Main Results	161
9.3	Appendix	181
	<i>Bibliography</i>	183
10.	General Grüss and Ostrowski Inequalities Using s -Convexity	185
10.1	Background	185
10.2	Main Results	189
	<i>Bibliography</i>	207
11.	Essential and s -Convexity Ostrowski and Grüss Inequalities Using Several Functions	209
11.1	Introduction	209
11.2	Background	211
11.3	Main Results	211
	<i>Bibliography</i>	235

12. General Fractional Hermite–Hadamard Inequalities Using m -Convexity and (s, m) -Convexity	237
12.1 Background	237
12.2 Main Results	244
<i>Bibliography</i>	255
13. About the Reduction Method in Fractional Calculus and Fractional Ostrowski Inequalities	257
13.1 The Reduction Method in Fractional Calculus	257
13.2 Fractional Ostrowski Type Inequalities	266
13.3 Addendum	273
<i>Bibliography</i>	275
<i>Index</i>	277
